 Krypton (from Ancient Greek: κρυπτός, translit. kryptos "the hidden one") is a chemical element with symbol Kr and atomic number 36. It is a member of group 18 (noble gases) elements. A colorless, odorless, tasteless noble gas, krypton occurs in trace amounts in the atmosphere and is often used with other rare gases in fluorescent lamps. With rare exceptions, krypton is chemically inert. Reading Modeling Marvels Computational Anticipation Of Novel Molecules Sat, 15 Sep 2018 09:39:00 GMT

 Neon ist ein bei Normalbedingungen einatomiges, farbloses und geruchloses Gas, das bei 27 K (−246 °C) kondensiert und bei 24,57 K (−248,59 °C) erstarrt. Es besitzt damit den kleinsten Temperaturbereich aller Elemente, in dem es flüssig ist. ??? -

Edelgase – Wikipedia

Wed, 12 Sep 2018 20:48:00 GMT *Physikalische Eigenschaften. Alle Edelgase sind unter Normalbedingungen einatomige, farb- und geruchslose Gase. Sie kondensieren und erstarren erst bei sehr niedrigen Temperaturen, wobei die Schmelz- und Siedepunkte umso höher liegen, je größer die Atommasse ist.*

Periodiske system - Wikipedia, den frie encyklopædi

Thu, 20 Sep 2018 11:06:00 GMT *Det periodiske system er en tabelarrangering af grundstofferne, ordnet efter deres atomnumre (antal protoner), elektronkonfigurationer og gennemgående kemiske egenskaber. Denne ordning viser periodiske tendenser, såsom elementer med lignende opførsel i samme søjle. Det viser også fire rektangulære blokke med omtrentligt ens kemiske egenskaber. . Generelt gælder det indenfor enhver række ...*

Tabla periódica de los elementos - Wikipedia, la ...

Tue, 18 Sep 2018 17:42:00 GMT *Historia. La historia de la tabla periódica está íntimamente relacionada con varios aspectos del desarrollo de la química y la física: El descubrimiento de los elementos de la tabla periódica.; El estudio de las propiedades comunes y la clasificación de los elementos.*
